DESKTOP-IU80L6E:~/linux_practice# wget --help
BusyBox v1.36.1 (2024-05-21 13:38:37 UTC) multi-call binary.

Usage: wget [-cqS] [--spider] [-O FILE] [-o LOGFILE] [--header STR]
        [--post-data STR | --post-file FILE] [-Y on/off]
        [-P DIR] [-U AGENT] [-T SEC] URL...

Retrieve files via HTTP or FTP

        --spider          Only check URL existence: $? is 0 if exists
        --header STR      Add STR (of form 'header: value') to headers
        --post-data STR    Send STR using POST method
        --post-file FILE   Send FILE using POST method
        -c                Continue retrieval of aborted transfer
        -q                Quiet
        -P DIR             Save to DIR (default .)
        -S                Show server response
        -T SEC             Network read timeout is SEC seconds
        -O FILE            Save to FILE ('-' for stdout)
        -o LOGFILE         Log messages to FILE
        -U STR             Use STR for User-Agent header
        -Y on/off          Use proxy

renice [-n|--priority|--relative] <priority> -g|--pgrp <pgid>...
renice [-n|--priority|--relative] <priority> -u|--user <user>...

Alter the priority of running processes.

Options:
-n <num>                specify the nice value
                        If POSIXLY_CORRECT flag is set in environment
                        then the priority is 'relative' to current
                        process priority. Otherwise it is 'absolute'.
--priority <num>        specify the 'absolute' nice value
--relative <num>        specify the 'relative' nice value
-p, --pid                interpret arguments as process ID (default)
-g, --pgrp               interpret arguments as process group ID
-u, --user               interpret arguments as username or user ID

-h, --help               display this help
-V, --version             display version

For more details see renice(1).

Usage:
fdisk [options] <disk>          change partition table
fdisk [options] -l [<disk>...] list partition table(s)

Display or manipulate a disk partition table.

Options:
-b, --sector-size <size>      physical and logical sector size
-B, --protect-boot            don't erase bootbits when creating a new label
-c, --compatibility[=<mode>]   mode is 'dos' or 'nondos' (default)
-L, --color[=<when>]          colorize output (auto, always or never)
                               colors are enabled by default
-l, --list                    display partitions and exit
-x, --list-details            like --list but with more details
-n, --noauto-pt              don't create default partition table on empty devices
-o, --output <list>          output columns
-t, --type <type>            recognize specified partition table type only
-u, --units[=<unit>]          display units: 'cylinders' or 'sectors' (default)
-s, --getsz                  display device size in 512-byte sectors [DEPRECATED]
    --bytes                  print SIZE in bytes rather than in human readable format
    --lock[=<mode>]          use exclusive device lock (yes, no or nonblock)
-w, --wipe <mode>            wipe signatures (auto, always or never)
-W, --wipe-partitions <mode> wipe signatures from new partitions (auto, always or never)

-C, --cylinders <number>     specify the number of cylinders
-H, --heads <number>         specify the number of heads
-S, --sectors <number>       specify the number of sectors per track
```

DESKTOP-IU80L6E:~/linux_practice# mkfs --help

Usage:
mkfs [options] [-t <type>] [fs-options] <device> [<size>]

Make a Linux filesystem.

Options:
-t, --type=<type>    filesystem type; when unspecified, ext2 is used
fs-options           parameters for the real filesystem builder
<device>             path to the device to be used
<size>              number of blocks to be used on the device
-V, --verbose        explain what is being done;
                     specifying -V more than once will cause a dry-run
-h, --help           display this help
-V, --version        display version

For more details see mkfs(8).

```

```

Usage:
umount [-hV]
umount -a [options]
umount [options] <source> | <directory>

Unmount filesystems.

Options:
-a, --all                unmount all filesystems
-A, --all-targets        unmount all mountpoints for the given device in the
                        current namespace
-c, --no-canonicalize    don't canonicalize paths
-d, --detach-loop         if mounted loop device, also free this loop device
                        --fake dry run; skip the umount(2) syscall
-f, --force              force unmount (in case of an unreachable NFS system)
-i, --internal-only       don't call the umount.<type> helpers
-n, --no-mtab            don't write to /etc/mtab
-l, --lazy               detach the filesystem now, clean up things later
-O, --test-opts <list>   limit the set of filesystems (use with -a)
-R, --recursive          recursively unmount a target with all its children
-r, --read-only          in case unmounting fails, try to remount read-only
-t, --types <list>       limit the set of filesystem types
-v, --verbose            say what is being done
-q, --quiet              suppress 'not mounted' error messages
-N, --namespace <ns>    perform umount in another namespace

-h, --help              display this help
-V, --version            display version

For more details see umount(8).

DESKTOP-IU80L6E:~/linux_practice# passwd --help
BusyBox v1.36.1 (2024-05-21 13:38:37 UTC) multi-call binary.

```

Usage: passwd [-a ALG] [-dlu] [USER]

Change USER's password (default: current user)

```

-a ALG  des,md5,sha256/512 (default sha512)
-d      Set password to ''
-l      Lock (disable) account
-u      Unlock (enable) account

```

```

DESKTOP-IU80L6E:~/linux_practice# chage --help

DESKTOP-IU80L6E:~/linux_practice# su --help
BusyBox v1.36.1 (2024-05-21 13:38:37 UTC) multi-call binary.

```

Usage: su [-lmp] [-s SH] [-] [USER [FILE ARGS | -c 'CMD' [ARG0 ARGS]]]

Run shell under USER (by default, root)

```

-, -l  Clear environment, go to home dir, run shell as login shell
-p, -m Do not set new $HOME, $SHELL, $USER, $LOGNAME
-c CMD  Command to pass to 'sh -c'
-s SH   Shell to use instead of user's default

```

```

DESKTOP-IU80L6E:~/linux_practice# lzma sample_lzma.txt
BusyBox v1.36.1 (2024-05-21 13:38:37 UTC) multi-call binary.

Usage: lzma -d [-cfk] [FILE]...

Decompress FILES (or stdin)

    -d      Decompress
    -c      Write to stdout
    -f      Force
    -k      Keep input files
    -t      Test integrity
DESKTOP-IU80L6E:~/linux_practice# ls
archive.tar    fruits.txt           sample.txt           sample_xz.txt

```

```

DESKTOP-IU80L6E:~/linux_practice# cp sample.txt sample_lzma.txt
DESKTOP-IU80L6E:~/linux_practice# lzma sample_lzma.txt
BusyBox v1.36.1 (2024-05-21 13:38:37 UTC) multi-call binary.

Usage: lzma -d [-cfk] [FILE]...

Decompress FILEs (or stdin)

    -d      Decompress
    -c      Write to stdout
    -f      Force
    -k      Keep input files
    -t      Test integrity
DESKTOP-IU80L6E:~/linux_practice# ls
archive.tar      fruits.txt       sample.txt       sample_xz.txt
data             permissions.txt  sample_bz2.txt   shortcut.txt
data_backup      renamed.txt     sample_lzma.txt  source.txt
DESKTOP-IU80L6E:~/linux_practice# lzop --help
BusyBox v1.36.1 (2024-05-21 13:38:37 UTC) multi-call binary.

Usage: lzop [-cfUvd123456789CF] [FILE]...

    -1..9    Compression level
    -d      Decompress
    -c      Write to stdout
    -f      Force
    -U      Delete input files
    -v      Verbose
    -F      Don't store or verify checksum
    -C      Also write checksum of compressed block
DESKTOP-IU80L6E:~/linux_practice# unlzop --help
BusyBox v1.36.1 (2024-05-21 13:38:37 UTC) multi-call binary.

Usage: unlzop [-cfUvF] [FILE]...

    -c      Write to stdout
    -f      Force
    -U      Delete input files
    -t      Test integrity
    -v      Verbose
    -F      Don't verify checksum
DESKTOP-IU80L6E:~/linux_practice#
